

Checking deliverable D9 and the final strategy note

Last production sequence of the module. Everything that follows this sequence is known: in session 10, finalization of the file in the morning, then the vivas before the group's security committee. What comes out of these three quarters of an hour is therefore doubly special: deliverable D9 is the last numbered piece of the file, and the strategy note to be closed is the final version, the one the committee will read first and that will be defended. The indicator set and the dashboard have existed in the tool since the morning workshop. This lab has half an hour of material, checking the set then the strategy note, and two hours of supervised time for the file, with one simple requirement: that every figure promised to the MERIDIAN group be defined to the point where a third party could calculate it without its author.

✓ The last deliverable, and why it is this one

Session objectives

By the end of this lab:

- The group's **deliverable D9** is checked: every indicator answers the committee's five questions, its sheet in the tool is complete
- The **dashboard** is consistent with the indicators and captured, dated, for the submission file
- The **strategy note** carries its final subsection and becomes the final document: reread, coherent, submitted

Prerequisites

- The indicators and the dashboard created in the tool at exercise 4 of the morning workshop, and that workshop's documents, each of which promises an indicator.
- The risk register and the treatment plan from session 7 (deliverable D7), the Statement of Applicability from session 8 (deliverable D8); several indicators in the set can be calculated directly from them.
- The strategy note in its session 8 state: eight subsections, from the session 1 context to the ISMS scope.

✓ Single step: check and complete the set (15 minutes)

To produce: a set that holds before the committee. The trap is not laziness, it is false precision: a formula that looks exact but for which nobody can say where the denominator lives.

1. **Test** each indicator against the five questions the committee will ask in session 10, they are known and deliberately so: who calculates this figure and from what; where does the threshold come from and what happens when it is crossed; who is this figure useful to and to decide what; what is its value today; which strategy note objective does it watch. An indicator whose sheet in the tool answers all five is ready for the viva.
2. **Complete** in the tool what each indicator lacks: formula and source in the description, threshold and what it triggers, recipient and decision informed, strategy note objective watched, owner of the reading, status.
3. **Read** the day's value of the calculable indicators not yet read: one dated sample, its value, and in the observation the count that justifies it with its source document.
4. **Check** the dashboard tile by tile: each tile matches an indicator, each indicator a definition and an objective of the note, no figure comes out of nowhere; capture the dated page for the submission file.

✓ Strategy note (15 minutes)

This version of the strategy note is the last one: the one that will be submitted, read by the committee and defended in session 10, in three to five pages of text, tables and appendices not counted, without deleting anything the previous eight sessions wrote in it.

The subsection to add is titled **"Indicators and finalization"**, and it does two things. First, it answers the question the whole note left open: how will the group know that this strategy is applied? The answer takes a few sentences: the D9 indicator set in summary, one line per indicator with its kind and its recipient, the quarterly CISO briefing where the dashboard is presented, and the at-least-annual review of the PSSI that closes the documentary system. Second, it closes the document on itself: in one sentence per earlier subsection, say which indicator or which mechanism of the ninth now watches what each one promised, the governance of the first, the critical assets of the second, down to the ISMS scope of the eighth. It is this loop that turns nine successive additions into a single document.

Then the final rereading, the one that never gets done and that costs points: the nine subsections are present, in session order; the figures cited are those of the file, not memories; the three to five pages are held, cutting adjectives rather than facts; and no subsection contradicts another, which happens more often than one thinks when eight versions have piled up. At the end of the quarter of an hour, the note is submitted. It is not touched again: in session 10, the finalization lab will check that it is indeed the version being defended, it will not offer a catch-up session.

✓ Supervised project time (120 minutes)

The day, and the module with it, ends with two hours of work in the room, the teacher remaining available to play the Chief Financial Officer or the Chief Executive Officer on request. This time replaces the session's second tutorial and part of its labs: it serves the submission file and the session 10 defence, in this order of priority.

1. **Finish** D9 in the tool: every indicator complete, the dashboard consistent with the indicators, the day's readings entered with their date, then the dated dashboard screenshot for the submission file.
2. **Submit** the final strategy note: nine subsections, reread from end to end, three to five pages of text, no contradiction between subsections.
3. **File** the submission by session, from 1 to 9: in each, the written CISO's desk of every group member and deliverables D1 to D9, in the form the group has chosen.
4. **Write** in the tool the privileged-accounts review procedure, exercise 2 of the workshop: optional.
5. **Prepare** the defence support: eighteen minutes of presentation, an outline that follows the strategy note, screenshots of the instance in support, then a timed rehearsal if time allows.
6. **Ask** the Chief Financial Officer or the Chief Executive Officer the questions the file leaves open, rather than inventing the answer.

What remains for session 10: the dated exports of the instance and carrying the owners into « Assigné à », at the morning's finalization lab, before the defences.
